

The reels are available in a two-speed design and cover the range from vertical jigging to livebait fishing, from casting to light trolling and for species up to sailfish and yellowfin tuna. This reel features a rigid one-piece 6061-T6 machined aluminium frame and left side plate construction, carbonite drag system with Cal's drag grease, and 17-4 grade stainless steel main and pinion gears.

The Machined Rigid Frame (MRF) construction incorporates a one-piece fully-machined aluminium frame. These rigid bar-stock frames are the ultimate in precision alignment and tolerances, withstanding more pressure and torque than any other material used in the industry for frame materials.

Okuma applies its Corrosion Resistant Coating (CRC) process to all internal and external parts for maximum protection. This utilizes a coating process of Corrosion X HD formula that actually penetrates and bonds to the aluminium parts for long-term protection.

The Ergo Grip handle knob is an extremely comfortable oversized handle knob design for both speed and power. This soft-touch knob has been ergonomically designed to fit in the palm of your hand.
